ART UNIT	PAPER NUMBER
----------	--------------

1722

DATE MAILED: 10/12/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/790,828	Applicant(s) MATSUMURA ET AL.	
	Examiner Matthew J. Song	Art Unit 1722	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 July 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-38 is/are pending in the application.
- 4a) Of the above claim(s) 20-38 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-19 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I, claims 1-19 in the reply filed on 7/18/2006 is acknowledged. The traversal is on the ground(s) that the claims of the present invention would appear to be part of an overlapping search area. This is not found persuasive because a serious burden exists in the differing issues likely to arise during the prosecution of the different statutory classes of invention. .

The requirement is still deemed proper and is therefore made FINAL.

2. Claims ²⁰⁻³⁸~~20-8~~ are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 7/18/2006.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 recites, "the phase modulation element has a phase distribution based on a phase modulation unit which is optically smaller than a radius of a point spread distribution range of the image formation optical system when converted to an image formation surface to

Art Unit: 1722

the image formation optical system” in the last six lines. Claim 1 is indefinite because the claim bases the phase distribution of the phase modulation element on an variable characteristic of the process. The phase distribution is based on the phase radius of a point spread distribution range, however the point spread distribution range is variable with the process of the apparatus since the point spread distribution is a function of the light amplitude distribution, complex amplitude transmittance distribution and the size of the aperture of the aperture diaphragm, note page 20, line 20 to page 22, line 20 .

Referring to claims 3-6, 8-9, 12-14 and 19, claims 3-6, 8-9, 12-14 and 19 further limit the phase modulation element which is optically smaller than a radius of a point spread distribution. The limitations are indefinite for the same reasons claim 1 is indefinite, as discussed above.

Referring to claims 2, 7, 10-11, and 15-18, claims 2, 7, 10-11, and 15-18 are indefinite because these claims depend from claim 1, thus incorporates all of the limitations of claim 1, including indefinite features.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-14 and 19 are rejected under 35 U.S.C. 102(b) as anticipated by Taniguchi (US 5,710,620).

Taniguchi discloses an apparatus comprising a phase shifted reticle where the angle of diffracted light generated from a pattern of the reticle varies with the line width and pitch of the pattern (col 10, ln 15-40 and col 12, ln 45-60), this reads on applicant's phase modulation element in which a phase of outgoing light beams relative to incident light beams differs depending on each position. Taniguchi also teaches an illumination system **1** used to generate light beams which enter the phase modulation element (col 5, ln 1-15 and col 10, ln 15-30). Taniguchi also teaches an image formation optical system **7A, 8** provided on an outgoing radiation side of the phase modulation element **R** (col 5, ln 1-67 and Fig 1). Taniguchi also discloses a stage **WS** for holding a wafer **W** (col 6, ln 45-65 and Fig 1).

Regarding the limitation "the phase modulation element has a phase distribution based on a phase modulation unit which is optically smaller than a radius of a point spread distribution range of the image formation optical system when converted to an image formation surface to the image formation optical system", the limitation is indefinite for the reasons discussed previously. For the purposes of expediting examination, the limitation is interpreted to be an intended use limitation based on the desired radius of a point spread distribution from the optical system. A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. Taniguchi discloses all of the apparatus limitation, as discussed previously, and the apparatus is capable of changing the illumination conditions, ring zone illumination and grading illumination by the arrangement of the parts, thus would be capable of the producing a point spread distribution radius which is optically large than the phase

Art Unit: 1722

modulation element. The same argument applies to claims 3-6, 8-9, 12-14 and 19 directed to features of the phase modulation element compared to the radius of a point spread distribution.

Referring to claim 2, Taniguchi teaches an area that shares a first phase value and a second phase value (Fig 2D and 2F).

Referring to claim 3, Taniguchi teaches a plurality of cells (Fig 3A and Fig 6).

Referring to claim 4, Taniguchi teaches pixel 13A.

Referring to claim 5, Taniguchi discloses a strip-like pattern (Fig 6 and 12A).

Referring to claims 6 and 10-14, Taniguchi discloses a plurality of normal patterns with different preciseness (line width and pitch) (col 12, ln 40-65), this reads on applicant's ratio of the line and space portion varies.

Referring to claims 7 and 9, Taniguchi discloses a cyclically divided area structures comprising a line space structure (Fig 11A).

Referring to claim 8, Taniguchi teaches a mixed reticle with cyclic properties (col 15, ln 10-25) and a pixel in Fig 13A.

Referring to claim 19, claim 19 contains all of the features of claim 1, as discussed previously, except the preamble is directed to a exposure apparatus. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951). Taniguchi teaches an exposure apparatus (Abstract).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claims 15-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taniguchi (US 5,710,620) as applied to claims 1-14 and 19 above, and further in view of Applicant's admitted prior art (AAPA)

Taniguchi discloses all of the limitations of claim 15, as discussed previously, except the phase modulation element turns the incident light beam to a light intensity distribution with a concave pattern that a light intensity is increased toward the periphery from a central area having a first intensity.

In a method of manufacturing a semiconductor, AAPA teaches a phase shifter and light absorption distribution are combined to irradiate a film with light beams having a intensity including a concave pattern and an inverse pattern (pg 3, line 1 to pg 4, ln 25 of the specification). It would have been obvious to a person of ordinary skill in the art at the time of the invention to modify Taniguchi by using the phase shifter taught by AAPA to produce a desirable light intensity pattern for the manufacture of semiconductors.

Referring to claim 16-18, the combination of Taniguchi and AAPA teaches concave and an inverse peak pattern.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Shiraishi (US 5,715,089) teaches a pattern of stripe and pixels (Fig 7A and 7C).

Kunii et al (US 6,388,386) teaches modulating a intensity of light beam using a cyclic light and dark pattern using a line, wavy lines and grid pattern (Abstract and Fig2A-2D).

Lin et al (US 5,539,568) teaches the size of the beam of light modulated by each pixel or element of the phase modulator should be no larger than the minimum feature of the mask (col 7, ln 40-65).

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew J. Song whose telephone number is 571-272-1468. The examiner can normally be reached on M-F 9:00-5:00.

Art Unit: 1722

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra Gupta can be reached on 571-272-1316. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
